In 16.12% attrition rate, Voluntary occupied 75.95%
(From 1985 to 2022 years working starting overall)

From 1996 backward to 1990, year from start date of employees, almost of employees continue working at company consistently until to date now, barely do not resign.

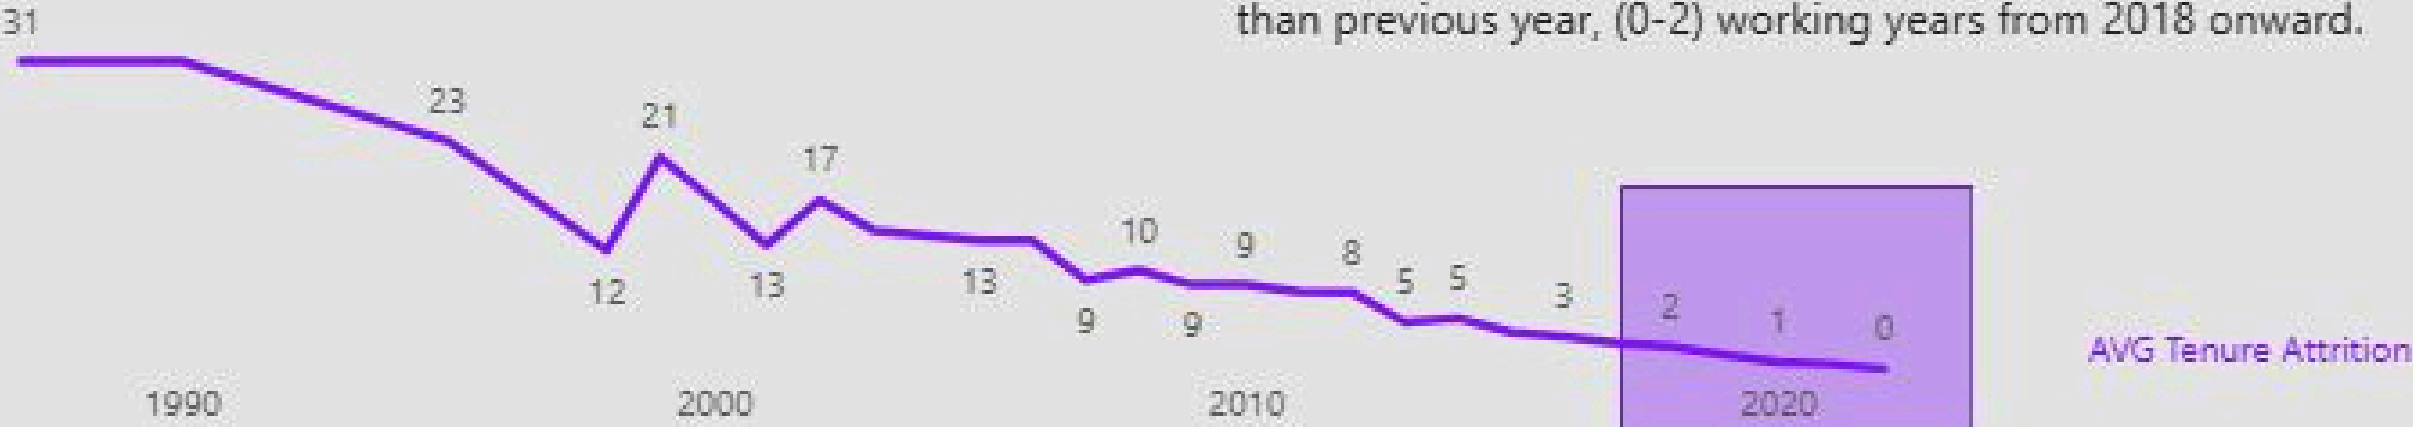

From 2009 onward, the voluntary attrition rate have a ziczac shape impacting on the consistent quality workload of the company resulting on the ineffective management in the future. But we also concern about the effect of the recession of 2009, a lasting negative event, cutting off employee from the company structure.

6.87

AVG Tenure Active

Average tenure of the continuing working employee at company is relatively high.
(from 1985 to 2022)

Tenure attrition in these years nowadays is much younger than previous year, (0-2) working years from 2018 onward.

%GenZ voluntary attrition rate by Year

If we don't have any actions to enhance retention rate, the early attrition is more likely happen in the future. Consequently, the human management is ineffective & the skilled, young, and energy human source is shortage, especially gen Z.

Satisfaction_Relationship				

~40% gen-Z at entry level after 0.83 year since the last promotion choose to quit job although they have a best work-life balance.

However, this sample in best work-life balance quite small, so I will further investigate with the gen-Z's better work-life balance segment.

Explain metrics

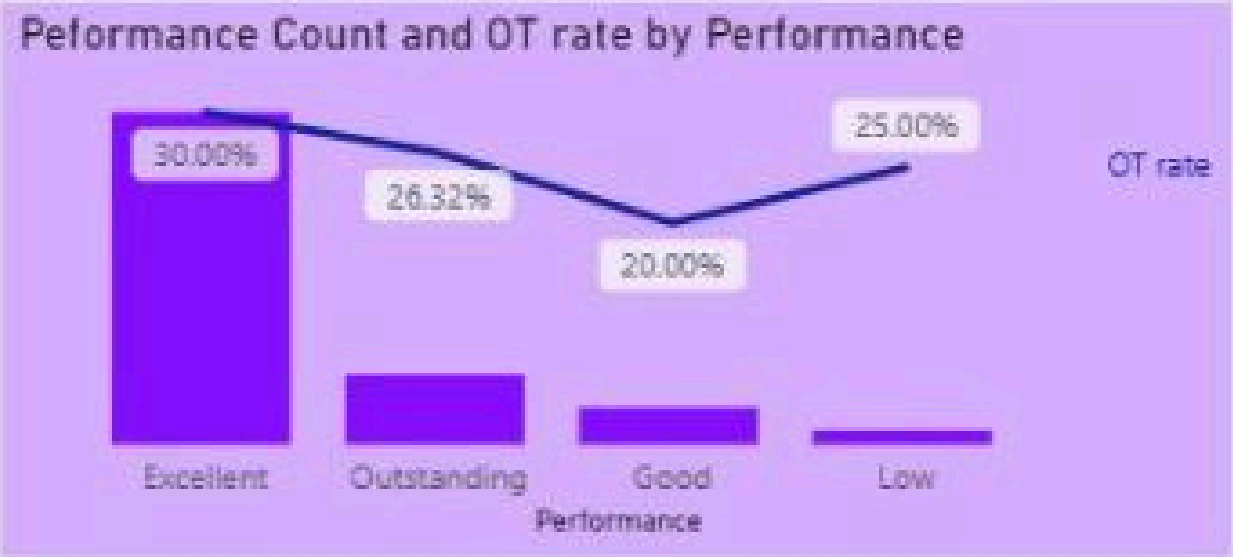

Read reports

Low Job Involvement is also a key driver to quit the job although gen-Z have a better work-life balance.

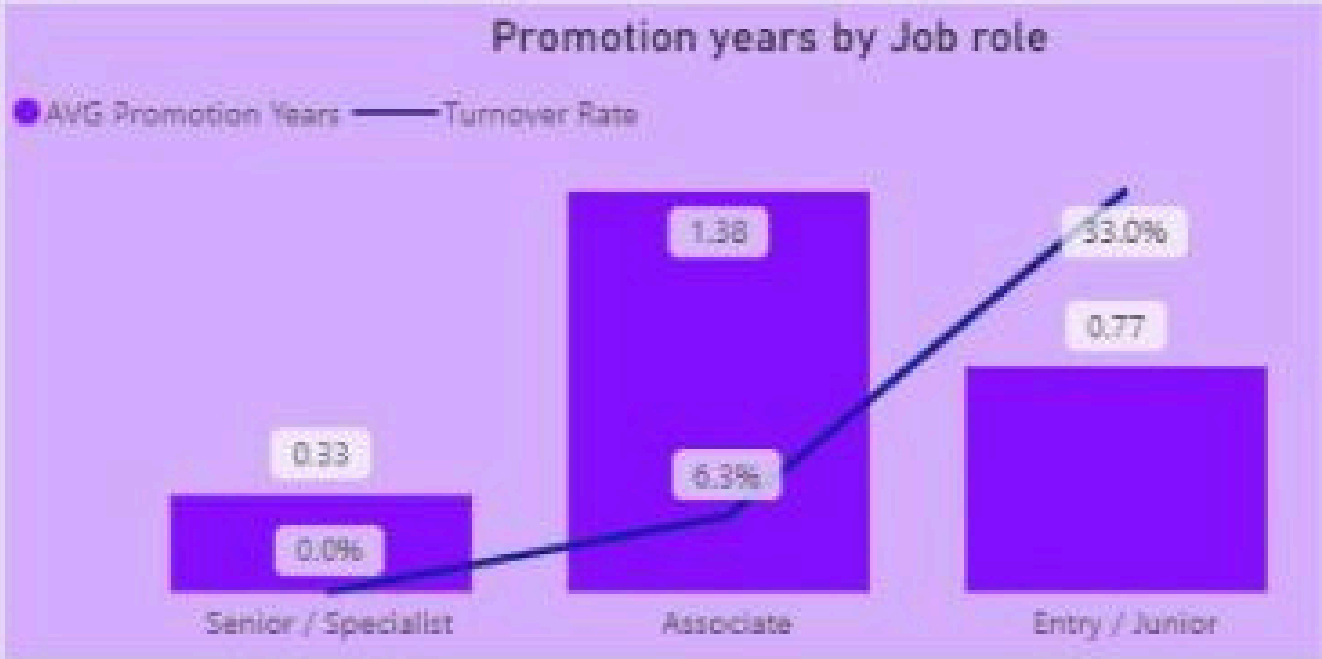

And they show about how OT can also have both impact on the performance.

In addition, training time is longer, the performance is more better. However, the training time also bring both result performance with the same time training.

33% gen-Z quit the job after 0.77 years since the last promotion, even they feel better work-life balance at entry level.

Gen-Z employees exhibit lower environment engagement level despite having better work-life balance and having a low job involvement level.

Minimizing the early attrition rate & Enhancing the young tenure employee of the gen-Z human source stay longer.

Pillar 1: Personalize promotion years according to gen-Z employee based on their performance.

Average 0.77-0.83 years taking so long for an entry level even the best or better work-life balance, Gen-Z also wonder if they are really learn & grow in this company or they just "chill" in a specific title.

Implement "**Micro-promotions**" or tiered milestones within a single role to provide a sense of continuous progress and clear career evolution.

Pillar 2: Enhancing job-involvement & environment satisfaction.

On the average tenure employee entry level is around 3.5 years they have more than 1 year without accompanying managers

Time spend with managers

Strengthen **Mentorship Programs** and 1-on-1 check-ins. Fostering a supportive social environment and meaningful connections with leadership will directly increase job involvement and overall workplace satisfaction.

Pillar 3: Revise the training course more suitable according to gen-Z's potential abilities.

Revitalize the curriculum to focus on **Practical Skills** and **On-demand Learning**. Tailoring development opportunities to their specific strengths will satisfy their need to "learn and grow" rather than just "chilling" in a role.

Pillar 4: Revise the OT policies avoiding negative results on the overall performance.

Shift toward a **Result-Oriented Culture** where efficiency is rewarded over hours worked. Maintaining a healthy work-life balance is essential to keeping Gen-Z engaged and productive in the long term.
